

# ChartWorld MyFleet

## Web Application

MyFleet is an easy-to-use web-based tool which supports onshore teams with checking and assessing risk in a ship's voyage plan.

It can be used anywhere, anytime – in the shipping company office or while working remotely.

This cloud-based free tool enables superintendents and fleet managers to conduct critical due diligence voyage planning from a safety perspective.

MyFleet shows the voyage plans and provides other safety-related information such as navigational data, current route, weather, and digital data used by the monitored vessel.
